About Me

Versatile software developer with a solid foundation in Java, JavaScript, Spring Boot, and React.js
from university projects. At Ford Otosan, I expanded my expertise with C#, .NET Core, SQL,
PL/SQL, and JavaScript, focusing on scalable web applications, database management, and user interfaces.
Proficient in working within scrum teams, I am eager to continue growing in a dynamic environment. I am also
open to relocation for suitable opportunities.

Skills

Backend: C#, ASP.NET Core, Java, Spring Boot,
Frontend: JavaScript, React.js, jQuery, HTML, CSS, Bootstrap, Tailwind CSS
Database: MySQL, Microsoft SQL Server, PostgreSQL, Oracle DB, PL/SQL
Tools & Others: Git, GitHub, Microsoft Azure, CI/CD, Object-Oriented Programming, Data Structures and
Algorithms, SOLID Principles, Design Patterns.

Experience

Software Engineer   Jul 2023 - Jun 2024
Ford Otosan   *Eskisehir, Türkiye*
- At Ford Otosan, I worked on enhancing user interfaces by implementing dynamic adjustments to tables and widgets using JavaScript and jQuery. I focused on backend development using .NET Core, implementing the UnitOfWork and Entity Framework repository pattern to streamline CRUD operations and API integrations. Additionally, I developed complex queries and procedures in T-SQL/PL-SQL to optimize Oracle database performance, collaborating within an Agile Scrum team to efficiently meet project goals.

Software Engineer Intern   May 2023
Acd Yazılım   *Eskisehir, Türkiye*
- During my internship, I focused on frontend development using React.js, JavaScript, and Tailwind CSS. I contributed to ongoing projects by developing user friendly and responsive interfaces while also improving UI/UX design.

Education

Eskisehir Technical University   Türkiye
Bachelor's Degree, Computer Engineering   *Aug 2019 – July 2024*

Coding Projects

Hobify │ *C#, .NET 8, Entity Framework Core, SQL Server, JWT, Onion Architecture*
- Developed a social media platform for hobby enthusiasts with features like user authentication, hobby feed, and user profiles. Built using Onion Architecture for scalability and maintainability.

Task Planner │ *Java, Spring Boot, PostgreSQL*
- Built a task management system with CRUD functionality and secure APIs via Spring Security, using PostgreSQL for data storage.

BlogApp │ *Java, Spring Boot, MySQL*
- A platform for creating and managing blog posts with features like user authentication, content management, and post creation. It is designed for scalability, with a clean, modular architecture that allows easy integration of features like user interaction and post categorization.
